

# Northwind Retail Azure FinOps Monthly Cost Review

Synthetic training document | Reporting period: August 2026 | Currency: USD | Not a real invoice

## Executive summary

August spend was \$18,742, up 12.4% from July. The increase is concentrated in the production App Service Plan, a new Premium container registry replication configuration, and retained disk snapshots. The \$1,184 unassigned cost bucket must be remediated before the September chargeback cycle.

| Service family     | July    | August  | Change | Driver / observation                                                            |
|--------------------|---------|---------|--------|---------------------------------------------------------------------------------|
| App Service        | \$4,980 | \$6,145 | +23.4% | P1v3 plan ran 3 workers for all hours; peak CPU remained below 45%.             |
| Virtual Machines   | \$3,860 | \$3,948 | +2.3%  | Development analytics VM ran 24x7 despite business-hours schedule tag.          |
| Managed Disks      | \$1,420 | \$1,784 | +25.6% | 1 TB unattached Premium_LRS disk plus 14 retained snapshots.                    |
| Storage            | \$2,210 | \$2,187 | -1.0%  | Hot tier capacity stable; lifecycle policy is not enabled on archive container. |
| Azure SQL          | \$3,106 | \$3,220 | +3.7%  | Production database workload stable; reservation review due in October.         |
| Container Registry | \$842   | \$1,104 | +31.1% | Premium SKU and image retention policy absent.                                  |
| Networking         | \$516   | \$354   | -31.4% | One public IP remains unassigned; cost is low but avoidable.                    |

## High-confidence actions

| Action                                              | Estimated monthly run-rate | Evidence                                                          | Owner / deadline       |
|-----------------------------------------------------|----------------------------|-------------------------------------------------------------------|------------------------|
| Delete or retain-document analytics-vm-01-data disk | \$122                      | Disk state is Unattached; no recovery ticket or retention tag.    | Data Platform / Sep 12 |
| Remove democost-unused-ip after dependency check    | \$4                        | Static public IP has no assigned address or downstream reference. | Cloud Ops / Sep 5      |
| Add ACR retention policy                            | \$35-\$90                  | Premium registry stores 84 untagged images older than 60 days.    | Platform / Sep 19      |
| Schedule analytics-vm-01                            | \$190-\$310                | Development tag says business-hours; VM showed 99.8% uptime.      | Data Platform / Sep 12 |

## Controls and caveats

Savings estimates are directional. Do not reduce production App Service capacity, database tier, redundancy, backup retention, or network exposure without owner approval and a measured utilization review. Cost exports are allocated by amortized cost and may lag usage by up to 48 hours.
